Why is River Lobos protected?
Because of its landscape and geological value since its multiple lines and different forms of time contribute to produce a spectacle of great beauty.

B) Because of the uniqueness of the Iberian natureland and the wild canyons carved out over thousands of years by the erosive action of the River Lobos.

Because it is a refuge for major populations of protected fauna.

What is a Protected Natural Space?
It is a rural area of special natural value that must be preserved using sustainable development models.

It aims to improve the quality of life of the inhabitants of the space through their participation—invoking the population—while preserving traditional customs and ensuring that the natural resources will be here for future generations to enjoy.

What is a Natural Park?
It is a relatively large space of significant natural and unique biological quality, where Man and his activities coexist with the dynamic processes of nature, through balanced and sustainable use of resources.

A unique landscape
Endonizing processes of erosion and tectonics, the River Lobos runs through the Sierra de Lobos contributing to the formation of a new landform, the Lobo river valley. With its mountainous Graham and its gentle meanders, it has carved canyons and gorges in the Gúdar and Benahor formations.

Some advice
If you are planning to visit the area, it is recommended to do so during the spring and autumn seasons, when the landscape is at its best. It is also advisable to carry water and food, as well as appropriate clothing for the weather, as the area can be quite cold.
